Challenge: While Loops - Fundamentals

A while loop is an alternative iteration statement. JavaScript's thread of execution will repeatedly process the code block until the while loop's conditional expression evaluates to false. **Be careful to avoid an infinite loop!**

Challenge

Use a while loop to increment `count` by 2 on each repetition of the block of code. Run the code block of your while loop until count is 8.

Is it working?   Check my answer

count should equal 8   ✔

```javascript
1 let count = 2;
2 // ADD CODE HERE
3 while (count < 8){
4   count += 2
5 }
6
7 // Uncomment these to check your work!
8 console.log(count);
```
